

## Fabrication is our heritage

Cape Plastics and Fabrication, Inc. (CPFI) is a company on the rise. As a custom fabricator we have become known for our high quality industrial tanks and drip pans. And now under new ownership, CPFI is looking to expand its operations to include many new and innovative products while still maintaining the quality that has built and sustained our reputation.

## Manufacturing is our future

At the new Cape Plastics, we know how to make plastic products. Bringing over 50 years of manufacturing experience, we have translated ideas from the backs of napkins into fully finished products and ramped up production in no time. How do we manage it? By employing expert materials procurement agents, experienced design engineers and seasoned workflow and process control personnel to support our ever-increasing volume business. We are ready to handle any challenge. We are equipped to handle large orders and deliver Just In Time products because we want to be a worthy extension of your business.

- CPFI has a proven quality control process for all of the products we manufacture (for tanks). It's one thing to say you make quality products, and it's another thing to prove it. Cape Plastics is the only maker of industrial tanks to offer the **SureSeal System**, a six-step quality assurance process we developed to make sure our tanks last.
- CPFI invests in its' people and our equipment. Specialized welding, routing, cutting and finishing equipment give us a competitive advantage over smaller manufacturers and/or fabricators.
- CPFI has valuable supplier relationships, and has enough buying power that it can continue acting as a distributor of plastic sheets as the manufacturing business grows.
- CPFI has plant capacity to produce innovative products to meet your demands at any volume.

## Innovation is our fuel

We think of ourselves as the perfect manufacturing partner. That means if you can think it, we can help you build it. We seek partnering customers who demand innovative, high quality support from their manufacturing partner, and understand the value of outsourcing their non-core requirements and applications

- CPFI has solid understanding of plastics/polymers and can provide consulting and troubleshooting services to help clients avoid using inappropriate materials for specific applications.
- CPFI is part of a family of companies that includes Willoughby Cast Products. We are actively seeking ways to combine solid surface materials from Willoughby with plastics from Cape to create new products and open new lines of business.
